

JA-ARC1 ARC for the reception of Jablotron products communicating via the CLOUD

An alarm receiving centre is ideal for smaller security agencies as well as for hospitals, factories or housing estates. In short, for all who need to monitor their premises and at the same time use a gate cabin or reception 24/7.

Description

The ARC is installed on a micro-PC and is sold as an out-of-the-box solution - almost everything has been set up, for the remaining settings there is a simple wizard and a video manual.

Automatic downloading of the configuration to the ARC has been pre-set for the JA-100.

- Designed for the JA-100, JA-80, AZOR, ATHOS and EYE-02 devices, which communicate via the JABLOTRON CLOUD.
- All in one application
- Plug & Play - very easy to put into operation
- Easy setting of premises - download of settings from the CLOUD (for the JABLOTRON 100+ only)
- DB backup on an internal CFast card
- Video manuals available
- The license is paid by JABLOTRON
