Guarding your security...

News Alert - May 2010

The new JA-83P compact wireless PIR detector

This new **compact PIR detector** is available giving great performance with a **smaller size** for **less visual impact**. It works with Jablotron's **OASiS** alarm system. It is designed to detect **human body movement** over 112 m² of floor space inside buildings.

The detection pattern can be modified by **optional lenses** to be **pet-immune**. The detector communicates via OASiS radio protocol and is powered by a **CR123 battery**.

Improved water-resistant siren housings

The **JA-80A**, **OS-360A**, **OS-365A** and **OS-350** outdoor sirens have now been much improved by the incorporation of **water-resistant housing arrangements** which allow the units to better endure **wet external conditions** allowing much more flexibility in deciding the positioning of the sirens in outside areas.

In the **JA-80A** siren we have also taken away the **plastic cover of the DPS board**, as it is no longer needed with this housing improvement. This also has the **advantage** of making **installation** much **easier**.
