News Alert - April 2011

The JA-82SH Wireless Shock and Tilt Detector

This new detector detects the shock/vibration of doors, windows etc. caused by an intruders attempts to force, smash, drill, or saw through. The detector uses the advanced digital signal processing of piezo element signals generated by vibrations. It offers easy installation with a simple calibration procedure, and has a memory of previous shocks to be sure of a real threat.

Ask our Export Dept for details of cost and delivery.

The new JA-87P outdoor PIR detector

The JA-87P is designed to indicate disturbances outside the building caused by human bodies. It is a two-zone outdoor detector by Optex with a 5° angular width detection zone which makes it very suitable for guarding narrow spaces. It is supplemented with a transmitter compatible with JA-8x OASiS systems..

Ask our Export Dept for details of cost and delivery.
