

News Alert - December 2011

The new SD-282ST hard-wired optical smoke detector

The **SD-282ST** replaces the now **out-of-production SD-280 (available while stocks last)** and detects fire inside **residential or commercial** buildings. Settings can be **smoke and heat, smoke or heat, smoke only, or heat only** and it is certified to **EN 54-7, EN 54-5, EN 50130-4, and EN 55022**. The detector has an **all-round indicator**. It has a selectable alarm **memory** function where the LED still lights after the alarm state is over. The alarm outputs are **ALARM and TAMPER** for control panel connection. The microprocessor performs **digital analysis** for high false-alarm immunity.

New firmware for the EYE-02 camera

We have launched a **new version of the web tool** for **remote access to EYE-02** GSM cameras. This new **version 2.0 of JabloToolWeb (JTW)** has a completely **redesigned user interface** in order to have simpler and well-arranged access to **stored events**, and easy control of the camera and setup parameters.

At the same time we released a **new firmware version (2.0)** for the camera, which is available on the **update server**.

The new generation of the camera firmware together with the web application brings **new features**, which **extend camera possibilities** and also add some **new applications**. Some applications are **free of charge**; some are **paid for by credit** which can be purchased through the Jablotool webpage. During the testing phase you can also use the **5.00 EUR credit** for exploring all new applications. At the same time the free testing of the Jablotool ARC application has finished. Using this application the camera **reports all events to a server** where they can be **searched for and displayed online**, without waiting for any camera response. Nowadays this feature is **integrated into a purchasable application** called **Access&Backup** and includes a **full back-up of camera settings**.

A big advantage is that this **backup is synchronized** even when the settings are changed on site using a cable connection with a PC.

Important information:

1. The new version of JTW charges **€ 0.1 per remote access session** from your credit for the time connecting with the camera. So if you want to use this new application you need to have **credit** or you can send an **SMS with a code generated by the application** to the camera in order to start communication with the application.

2. The **previous version of JTW is always available** after clicking the banner called **"Previous JabloTool version"** on the home page of the **JTW 2.0 application** or on the **direct link** below. There is **no credit charged** when you access the camera using this version. The number of connections is limited to **20 connections a month**. When more connection is needed you can send an **SMS from your phone** with a **code** generated by the application.

See the below link for more info:

The Tiny baby video monitor system

The **Tiny** system is designed to **monitor remotely** the activity of your **sleeping baby**, both **visually and acoustically**, allowing parents to **keep an eye on their baby** and be elsewhere in the home at the same time.

Any sudden **noise** will make the wireless **receiver beep loudly** to attract your attention. The **2.4 inch LCD display** and **speaker** on the receiver gives you **good-quality video** and sound up to **150 metres (480 feet)** away.

The camera has **no adverse effects on the baby**. If the signal from the camera is lost, an alarm is triggered. The system is very **easy to operate** with only **3 buttons** and a **simple and clear menu**. **Night vision** of up to **4.5 metres** is also featured, and the **viewing angle** is easily set up.

The system can be powered by the **mains and rechargeable batteries**. LCD display **sleep mode enhances battery life** until a sound is detected. There is also a **video/audio output** on the receiver for connecting a **TV for large-screen viewing or recording**, if desired.

See the below link for more details.
