News Alert - June 2010

The new AC-88 Smart Wireless Socket

The **AC-88** is a wirelessly controllable **intelligent socket**. It can enable the **remote switching** of mains appliances (230V/50Hz/16A), **boilers, electrical heaters, lighting, ventilation** etc. and has 8 wireless enrollment channels.

The internal **mains relay** can be controlled by:

- the unit's own button
- RC-8x series Oasis remote controls
- JA-8x series Oasis detectors
- TP-8x series wireless thermostats
- the wireless PG output signals from JA-8xK series Oasis control panels, GD-04 David units, and EYE-02 security cameras

The unit can toggle its output, or switch on for a given time (**1 minute to 24 hours**). The AC-88 also has a **built in transmitter**, which means that a **chain of slave AC-88s** or other **OASIS system devices** (AC-82, UC-82, GD-04R wireless relays or JA-8xK control panels with JA-82R radio modules) can be formed so that the status of the master AC-88 can be **copied by all the other enrolled devices**.

The AC-88 is only available in EURO-type plug versions.
