► I CAN SEE AND HEAR MORE

The Tiny video monitor is a big help, not only in families with small children, but everywhere where it is needed to be in the picture about what is going on. Thanks to the small camera and portable receiving unit you can hear and see what your kids are doing at that moment. If there is any sudden noise in the children's room, the receiver beeps and you can immediately see if everything is all right with the kids.

Tiny is very easy to operate – 3 buttons can do all the work and you are kept informed. All the settings can be done via a simple menu, so the device will easily meet all your requirements.

Digital wireless technology provides you with a quality picture and communication range. The signal transmission is interference-free and can reach up to 150 meters.

► WHAT DOES TINY OFFER?

► EARLY WARNING

Tiny will always warn you in time as it hears any noise in the children's room. The wireless receiver indicates a short alarm using its built-in siren to let you know there was sound coming from the camera. The receiver also indicates a lost signal. The noise level which triggers the receiver warning you, is easily set.

► EASY TO OPERATE

Tiny is very easy to operate – 3 buttons can do all the work and you will stay informed. All the settings can be done via a simple menu, so the device will easily meet all your requirements.

► QUALITY VIDEO AND RANGE

Digital wireless technology provides you with a unique picture and communication range. The signal transmission is interference-free and can reach up to 150 meters.

► INSTALLATION

The camera and the receiver can be powered either by batteries or from the mains. The parents' unit (receiver) also has the option of recharging the backup batteries from the cradle in which the receiver can be conveniently placed wherever you are at the time. Whenever it is needed, you can take the receiver with you, it also offers a belt clip.

A battery saving function is implemented to prolong the battery life time. When using this feature, the receiver display only switches on when there is noise in the monitored room.

The camera can be installed directly on the wall or you can easily place it on a shelf. Thanks to a rotary joint you can set the proper viewing angle.

THE CAMERA

- Night vision up to a distance of 4.5 meters (can be operated remotely from the receiver)
- Easy setting of the proper viewing angle (60 degrees)
- Mains powered or powered by the rechargeable battery
- Built-in sensitive microphone

THE PARENTS' UNIT (RECEIVER)

- 2.4" LCD display with good quality resolution
- Sound and video transmission up to 150 meters (480 feet)
- The receiver checks the quality of the signal, if the signal is lost, there is an acoustic warning
- Built-in rechargeable battery enables full portability of the receiver
- Battery saving switches off the display, and is automatically reactivated by sound from the children's room
- Settable volume level for the receiver and for display triggering by noise
- Video/audio output enables you to watch the video on a bigger screen, or to record it

OUR RECOMMENDATION

Even more peace of mind

in combination with the Nanny breath monitor
