

News Alert - September 2010

JA-80W wireless PIR / MW motion detector

This high-tech detector offers the traditional reliability of PIR motion detection together with a microwave detector to confirm the presence of a moving intruder. The low-power microwave transmitter is only activated after PIR activation avoiding the need to illuminate the area with microwaves continuously, with the added advantage of saving battery power.

For more details, please see the below link and contact us.

National Holidays and stock transfer

28th September is a national holiday (St Wenceslaus Day) in the Czech Republic and so Jablotron will be closed for business on that day. On 30th September and 1st October our stock room will be closed as we transfer all of it to a new and better location, so no shipments can be sent out during this time. Please order in advance to avoid any inconvenience.

More details on product training

We have updated our web page about our training service for you to know more about how to become an authorized Jablotron installer. Please click below.

JA-63KRX now offered as separate units only

Jablotron will no longer supply the JA-63KRX in its current form, but instead as separate JA-63KR and JA-65X units. This is to help our distributors to organize their stock better by avoiding having too many specialized control panel types. The JA-65X is easily installed in the control panel.

Note: Product specifications are subject to change without prior notice.
